STATEMENT OF WORK ACCURACY AND GUARANTEE

ACCURACY

All reasonable efforts will be made to ensure the accuracy of the information gathered from clients to be used for database analysis and generation of an FDA approved Nutrition Panel. R.L. Testing Laboratory uses the nationally recognized Esha™ Genesis™ software package to conduct desktop analysis of client recipes. The software generates reliable artwork in a format compliant with FDA requirements for food labeling.

The FDA and USDA, as well as 90 of the top 100 US food manufacturers, use the Esha™ Genesis™ software program to conduct database analysis. It should be noted that the USDA and FDA do not authorize any user of their software to use the government agencies as endorsement of accuracy and validation, however, this software is considered the most accurate of any package available on the market. National food/beverage company, Starbucks Coffee®, has stipulated that all vendors selling food products to them contain nutrition fact panels generated by Esha™ Genesis™ Software – no exceptions.

D'Lites Emporium has made a reasonable effort to provide nutritional and ingredient information based upon standard product formulations and following FDA guidelines. Variations may occur due to: type of machine used (gravity/pump), condition of machine, different manufacturers of soft-serve machines, size of the air orifice used, scraper blades, and volume sold through machines.

The Federal Food and Drug Administration permits actual calorie counts to fall within 20 percent of the caloric claims for the product.
